### Discover Art in Math

Weber State University Developmental Math invites the public to enjoy an art acquisition installed in their office suite in the Tracy Hall Science Center.

Math and art have long been intertwined as always with the beauty of the creation of art.

The faculty of the Developmental Math department at Weber State University sought to emphasize the beauty of this relationship between mathematics and art when choosing a piece to display in their reception area.

The piece, titled *Pilots of Archimedes*, is a 48" x 48" acrylic on canvas, painted by Seattle-based artist Michael Schultheis. His work has been described as "scribbled notations of recursion with the intricate, geometric interpretation that rotate and shift across the plane, sometimes looking like naively colored petals, flowers, butterflies, or leaves." His art creates a portal through which the inexperienced mathematician can connect with the art. *Pilots of Archimedes* is inspired by the works of Archimedes, Gottfried Leibniz, and Isaac Newton.

The Developmental Math office in TV 207 is open Monday – Friday 8:00 am to 4:00 pm. Parking is available in the visitor lot east of the pod.
